Complement Notation

1's Complement There is a simple algorithm to convert a binary number into 1's complement. To get the 1's of a binary number, simply invert the given number.

for ex $110010 \xrightarrow{1's \text{ complement}} 001101$

→ it is use ~~not~~ gate for each input bit
2's Complement for getting the 2's complement simply invert the given number and add 1 to the LSB of given result.

for example 110010
1's Complement 001101
Add 1 → $\underline{\underline{001110}}$

→ use ~~not~~ gate along with full adder for each input bit.

Negative magnitude one represented in the same way as in the case of sign bit on 1's complement representation.

(1)

Numericals of 1's complement and 2's complement PAGE NO.

1. 1's Complement Subtraction:

steps subtraction of small no to large number

steps subtraction of small no to large number

1. Determine 1's complement of the smaller no.
2. Add this to larger number
3. Remove the carry and add to result. The carry is known as end around carry.

Example $(1111)_2 - (1010)_2$

Direct Subtraction

$$\begin{array}{r} 1111 \\ - 1010 \\ \hline 0101 \end{array}$$

1's complement method

$$\begin{array}{r} 1111 \\ + 0101 \quad \leftarrow 1's \text{ complement} \\ \hline 0100 \quad \leftarrow \text{Add carry} \\ \hline 0101 \end{array}$$

2. Subtraction of longer no from a smaller one

1. Determine the 1's complement of the longer number
2. Add this to smaller number
3. The answer in the 1's complement of the true result and opposite in sign. There is no carry.

Example $(1111)_2 - (1010)_2$

Solution

Direct Subtraction

$$\begin{array}{r} 1111 \\ -1010 \\ \hline 0101 \end{array}$$

2's Complement method

$$\begin{array}{r} 1111 \\ +0110 \\ \hline 0101 \end{array}$$

① carry is discarded

Answer is 0101

→ Subtraction of large number from smaller number

1. Determine the 2's complement of the longer number
2. Add the 2's complement to the smaller number
3. No carry is generated, result in 2's complement form and is negative.
4. To get the answer in true form take the 2's complement and change the sign.

Example $(1000)_2 - (1010)_2$

Direct Subtraction

$$\begin{array}{r} 1000 \\ -1010 \\ \hline 0010 \end{array}$$

2's Complement method

$$\begin{array}{r} 1000 \\ 0110 \end{array} \leftarrow \text{2's complement}$$

$$\hline 1110 \leftarrow \text{no carry}$$

So the answer is

$$-0010 = -2$$

(12)

Different Case for 1's and 2's Complement method PAGE NO.

1. Addition in the 2's Complement method

Case 1 When both numbers are positive

$$\begin{array}{r} \text{Ex} \\ +29 \\ +19 \\ \hline \end{array}$$

$$\begin{array}{r} 0 \quad 001 \quad 1101 \\ 0 \quad 001 \quad 0011 \\ \hline 0 \quad 011 \quad 0000 \end{array} \begin{array}{l} \text{(Augend)} \\ \text{(Addend)} \\ \text{(sum=48)} \end{array}$$

↑ signbit + 48

for n bit. = -2^{n-1} to $(2^{n-1}-1)$

5 bit = -2^{5-1} to $(2^{5-1}-1)$
-16 to 15

if the number is not in range than the result is in overflow range

Condition of Overflow

$$\begin{array}{r} 01001 \\ 00111 \\ \hline 10000 \end{array} \left. \begin{array}{l} \text{no. of bits in 5} \\ \text{bit number form} \end{array} \right\}$$

→ The result is invalid

→ It is not in the range

Case 2 When addition of positive or negative numbers
Positive number > negative number

$$\begin{array}{r} +13 \\ -6 \\ \hline \end{array}$$

$$\begin{array}{r} +6 \rightarrow 00110 \\ 2's \\ \text{Complement} \rightarrow 11010 \\ \text{of } 6 \end{array}$$

$$\begin{array}{r} +13 \rightarrow 01101 \\ -6 \rightarrow \underline{11010} \\ \text{carry.} \quad \textcircled{1} \quad \underline{00111} \end{array}$$

ignore the carry = +7

Case 3

$$\begin{array}{r} -15 \\ +9 \\ \hline \end{array}$$

Negative number > positive number

$$+15 \rightarrow 01111$$

10000 ← 1's Comp of 15

$$+1$$

10001 ← 2's Comp of 15

$$-15 \rightarrow 10001$$

$$+9 \rightarrow 01001$$

$$\textcircled{1} \quad 1010$$

MSB shows
that result is
negative.

So it reflects the 6 into
2's complement form

change the Result into 2's Comp

$$11010 \xrightarrow{2's} 00110$$

$$+6$$

Case 4 Addition of two negative numbers

$$\begin{array}{r} -8 \\ -4 \\ \hline \end{array} \quad +8 \rightarrow 01000$$

$$2's \text{ Complement} \rightarrow 11000$$

$$+4 \rightarrow 00100$$

$$1's \text{ Complement} \rightarrow 11100$$

$$-8 \rightarrow 11000$$

$$-4 \rightarrow 11100$$

$$10100 \rightarrow -12$$

$$01100 \rightarrow +12$$

$$\begin{array}{r} \text{Ignore} \quad \textcircled{1} \quad \underline{10100} \\ \leftarrow 2's \text{ Complement} \end{array}$$

COLLEGE OF ENGINEERING

(13)

DETAILED LECTURE NOTES

Subtraction in the 2's complement form:

PAGE NO.

Case 1 Both the numbers are positive

$$5 - 3 = 5 + (-3) = +5 = 00101$$
$$\quad \quad \quad -3 = +11101$$

$$\begin{array}{r} & 0010 \\ & +1110 \\ \hline 0010 & \xrightarrow{\text{ignore the carry}} \end{array} \rightarrow +2$$

The result is positive

Case 2 One positive and one negative number.

$$9 - (-6) \rightarrow 9 + 2's \text{ complement of } (-6)$$
$$+9 \rightarrow 01001$$
$$-(-6) = +6 \rightarrow 00110$$
$$\begin{array}{r} & 01001 \\ & +00110 \\ \hline 01111 & \xrightarrow{\text{+6}} \end{array} \rightarrow +15$$

Case 3 Both numbers are in 2's complement form

$$P = 11011$$

$$Q = 01101$$

$$P - Q$$

$$P + (2's \text{ complement of } Q)$$

0 11 01 → 2's complement of 62

10011

+ 11011

①

0 1110

Ignore the carry

the msb of the result is 0
means the result is positive
but the result required is in
negative.

11011 → the no is in negative form

-5 11011

+5 00101 2's complement

+13 01101

+13 + 5 = +18 the result is not in the
range for 5 bit no representation
so the received output is not in the
correct form.

9's and 10's Complement

PAGE NO.

9's complement of a decimal number can be found by subtracting each digit of the number from 9.

Decimal digit	9's Complement
0	9
1	8
2	7
3	6
4	5
5	4
6	3
7	2
8	1
9	0

Example

Find 9's complement of each of the following numbers

$$(a) 19 \quad (b) 146$$

(a) $\frac{19}{\text{from } 9}$ → subtract each digit in the number from 9 to get the 9's complement

$$\begin{array}{r} 99 \\ -19 \\ \hline 80 \end{array}$$

9's complement of 19

$$(b) \begin{array}{r} 999 \\ -146 \\ \hline 853 \end{array}$$

9's complement of 146

9's Complement Subtraction

Subtraction is done of a smaller number from the larger one system is done by the addition of the 9's complement to the subtrahend.

Subtraction of large number from a smaller no. one does not produce carry, the result is negative in the 9's complement form.

Example

$$(a) \quad 18 - 06$$

Regular Subtraction

$$\begin{array}{r} 18 \\ - 06 \\ \hline 12 \end{array}$$

9's Complement Subtraction

$$\begin{array}{r} 18 \\ 93 \xleftarrow{\text{9's complement}} \\ \hline (1)11 \\ + 1 \xleftarrow{\text{Add carry to Result}} \\ \hline 12 \end{array}$$

(b)

$$\begin{array}{r} 34 \\ - 49 \\ \hline -15 \end{array}$$

$$\begin{array}{r} 34 \\ + 50 \xleftarrow{\text{9's complement}} \\ \hline 84 \\ \downarrow \\ -15 \xleftarrow{\text{9's complement}} \\ \hline \end{array}$$

of 84

DETAILED LECTURE NOTES

10's Complement

PAGE NO.

10's complement of a decimal number is equal to its 9's complement + 1.

$$\underline{9} \quad 9 \quad (b) \quad 46$$

$$\begin{array}{r} 9 \\ -9 \\ \hline 0 \end{array} \leftarrow \text{9's complement of 9}$$
$$\begin{array}{r} +1 \\ \hline 1 \end{array} \leftarrow \text{10's complement of 9}$$

$$\begin{array}{r} 99 \\ -46 \\ \hline 53 \end{array} \leftarrow \text{9's complement of 46}$$
$$\begin{array}{r} +1 \\ \hline 54 \end{array} \leftarrow \text{10's complement of 46}$$

Example Subtract the following decimal numbers using the 10's complement method.

Solution

$$(a) 9 - 4$$

$$(b) 69 - 32$$

$$(c) 347 - 265$$

The minuend is added to the 10's complement of the subtrahend and carry is dropped.

Q. 9-4

Regular Subtraction

$$\begin{array}{r} 9 \\ - 4 \\ \hline 5 \end{array}$$

10's Complement

$$\begin{array}{r} 9 \\ + 6 \\ \hline \underline{(1)5} \end{array} \leftarrow \text{10's complement of } 4$$

DROP carry

(b) 69

$$\begin{array}{r} - 32 \\ \hline 37 \end{array}$$

$$69$$

$$\begin{array}{r} + 68 \\ \hline \underline{(1)37} \end{array} \leftarrow \text{10's complement of } 32$$

DROP carry

(c) 347

$$\begin{array}{r} - 265 \\ \hline 82 \end{array}$$

$$347$$

$$\begin{array}{r} + 735 \\ \hline \underline{(1)082} \end{array} \leftarrow \text{10's complement of } 265$$

DROP carry

DETAILED LECTURE NOTES

PAGE NO.

R1's Complement

for finding the complement, R1's Complement

Comp of $(7)_{10} = 10 - 7 = 3$

$(9)_{10} = 10 - 9 = 1$

$$N = 7$$
$$n = 1 \rightarrow \text{total no of digit}$$
$$\sigma = 10$$

So the generalized formula.

$$\boxed{\sigma^n - N} \quad \text{R1's Complement}$$

1) $N = 5690$

determine 10^4 's Complement.

$$\sigma = 10$$

$$= 10^4 - 5690$$

$$N = 5690$$

$$= 10000 - 5690 = 4310$$

$$n = 4$$

Ex $N = 1101$ find 2^4 's Comp

by using formula

$$\sigma = 2$$

$$N = 1101$$

$$= 2^4 - 1101$$

$$n = 4$$

$$= (16)_{10} - 1101$$

$$= 10000 - 1101$$

$$= 00011$$

$(n-1)^{\text{th}}$ Complement

n^{th} Compl.	$(n-1)^{\text{th}}$ Compl	n^{th} Compl
$n = 10$	10^{th} Compl	9^{th} Compl
	2^{nd}	1^{st}
$n = 2$	8^{th}	7^{th}
$n = 8$	16^{th}	15^{th}
$n = 16$		

Calculate n^{th} Complement using $(n-1)^{\text{th}}$ Complement

$$(n-1)^{\text{th}} \text{ Comp} = \boxed{n^n - N - 1}$$

$$(n-1)^{\text{th}} \text{ Comp} = n^{\text{th}} \text{ Comp} - 1$$

$$\boxed{(n-1)^{\text{th}} \text{ Comp} + 1 = n^{\text{th}} \text{ Comp}}$$

In $(n-1)^{\text{th}}$ complement no borrow operation involved for producing the circuit in lesser time.

Ex 1's Comp of 1101

by using formula $2^4 - 1101 - 1$

$$16 - 1 - 1101 = (15)_{10} 1101$$

$$= 1111 - 1101$$

$$= 0010 \rightarrow 1^{\text{st}} \text{ Comp}$$

Ex 2 7's Complement of octal no.

5674.

$$= 8^4 - 5674 - 1$$

$$= (4096)_{10} - 5674 - 1$$

$$7777 - 5674 = 2103 \rightarrow 7^{\text{th}} \text{ Complement}$$

8's Comp of 5674

$$= 2103 + 1$$

$$= 2104 - 8^{\text{th}} \text{ Complement}$$
